NUCLEAR AGE BIBLIOGRAPHY  
HISTORICAL STUDIES PUBLISHED SINCE 1/1/1975

During the last decade, scientists, scholars, and journalists have published hundreds of studies dealing with the history of nuclear arms. This bibliography aims to improve access to this rapidly expanding literature by providing a topical listing of all those studies in English that, upon hasty review, appear to contribute to our factual knowledge and/or interpretative understanding of the development, uses, and impacts of nuclear weapons since 1939. Given the magnitude of the task, it is likely both that some of the listed studies are of no importance and that some overlooked studies are of real value. I would appreciate suggestions for deletions and additions.

To assist those readers just beginning work on this subject, some sections open with a listing of the authors of classic (i.e. pre-1975) historical studies.

The entries followed by call numbers indicate items located at U.C. Irvine or borrowed from other campuses. These call numbers should be the same at other libraries using the Library of Congress system. The entries for dissertations include references to abstracts appearing in Dissertation Abstracts International (abbreviated DAI).

This project has been funded by the University of California's Institute on Global Conflict and Cooperation, UC San Diego, La Jolla, Ca. 92093.
